Powerail versions (drawings see page 5).

Type KBSL⁽¹⁾
color: green

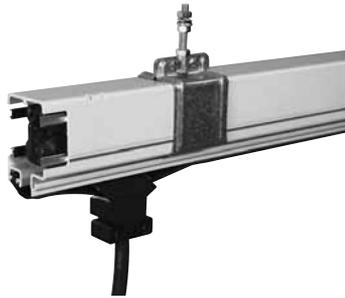

Type KSL
color: green

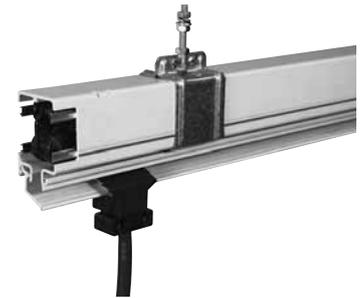

Type KSG
color: gray

Type KSLT
color: gray

Type KSLT
with sealing strip „D“

Type KSLT
with plastic shielding „FP“

General

The Powerail types KBSL, KSL, KSLT and KSG are totally enclosed, touch-proof conductor systems for safe mobile power feeding of: Overhead Cranes, Monorail Systems, Electric Hoists, Automated Storage and Retrieval Systems, Electric Power Tools, Machine Tools, Assembly and Test Lines, Hangar Door Motors, Studio & Station Lighting Systems and many other applications.

These Powerails can be used for indoor and outdoor applications

Because of the more favourable thermal properties we recommend to use a Powerail type with gray housing (KSLT/KSG) for outdoor applications.

Main characteristics are minimum space requirement, easy installation and resistance against corrosion.

VAHLE Powerails fully meet all VDE safety requirements.

Other combinations of cross sections, as shown on page 5, are possible. Regulation VDE 0100, part 430 has to be considered when using an N-conductor. Powerail KSLT can be equipped with sealing strip «D» (IP 24) or with plastic shielding «FP».

The touch-proofness is only guaranteed if the collectors are totally inserted into the Powerail system. If the Powerail is mounted within easy reach and the collectors can leave the system during operation, protection against manual contact must be provided. This is valid for tensions above 25 V three-phase current and 60 V alternate current.

2 ⁽¹⁾ KBSL is w/o stiffener clamps.

KSL/KSLT and KSG will be equipped with stiffener clamps.

BASIC DESCRIPTION OF POWERRAILS AND COMPONENTS

Approvals

KSL/KSG: UL-approved.
KSL/KSLT: CSA-approved on request before placing the order

Housing

Plastic with 4 or 5 copper conductors.
For indoor applications: KBSL and KSL in color green.
For indoor- and outdoor applications: KSLT and KSG in color gray.
Supply lengths 1 m, 2 m, 3 m, 4 m.
KBSL will be supplied without stiffener clamps; KSL, KSLT and KSG with preassembled stiffener clamps.
Short lengths and curves are available.
The ground conductor is identified by international color code.
Long and short lip housing profiles (see page 6) and collector safety keys avoid phase reversing.
Any number of conductors can be accomplished by installing various Powerails side by side.

Bolted joints or spring loaded joints are available for KBSL, KSL and KSLT 40 - 100 A.
For 140 and 200 A versions bolted joints are always required. The Powerail sections for spring-loaded and bolted joints are constructed in the same way.

Couplings

KBSL, KSL and KSLT are connected by plastic joint covers, KSG by galvanized joint plates.

Main power supply

The Powerail systems can be fed either by a line feed or an end feed.

End caps

The open ends of Powerail are closed by end caps.

Hangers

Standard brackets for Powerail attachment to crane girders are available (see page 8). Each 4 m Powerail section should have 2 support points. Maximum support spacing 2000 mm. Use sliding hangers, allowing expansion and contraction. Rigid hangers for anchor points in the center of each run or in curves.

Expansion during temperature fluctuation

Expansion can be compensated for all Powerails either by expansion sections (without electrical separation) or telescope sections (with electrical separation).

Anti-condensation sections

These sections are used for transfer of the Powerail to outdoor areas to avoid condensation. The Powerail is not separated electrically. Alternatively telescope sections are available.

Contact sections, turntables and switches

Powerail for working areas and transfer applications see page 13.

Sectionalizing

Available in air gap version, where the collector carbon bridges the gap, e.g. for mains.
Also available in insulating piece version. In this case the insulating piece is longer than the carbon and each Powerail section can be separated electrically, e.g. for control.

Collector

The current collectors are made of re-inforced polyester, for high strength and light weight. Spring loaded carbon brushes maintain uniform contact. Connecting cables or terminal boxes and hinged or flexible towing arms included. Double collectors for transfer applications and higher amperage.

The length of the collector cable may not exceed 3 m if the added overcurrent protection device is not designed for the load capacity of this cable. Please refer also to regulations VDE 0100, part 430 and EN 60204-32.

(Note: this might happen in case of several collector running in one system).

The connecting cables are sufficiently dimensioned for the indicated continuous current ratings.

Consider reduction factors for different kinds of installation as per VDE 0298-4.

Please note: For use in galvanizing and pickling plants, under aggressive conditions and low voltage applications we would appreciate receiving detailed information, especially of the environmental conditions. For quotations and order processing including Powerail systems with curves, dead sections, turntables, switches etc. we require your drawings or sketches. Please use our questionnaire, page 29/30.

**All steel parts and hardware of Powerails can be supplied in stainless steel version.
Use KSL 200 A for several smaller capacity consumers and KSG 200 A for one heavy duty unit.**

Technical Data of Powerail KBSL · KSL · KSLT · KSG					
Electrical properties:			Mechanical properties:		
Dielectric strength	DIN 53481	30–40 KV/mm	Flexible strength	75N/mm ² ± 10 %	
Specific resistance	DIN 53482	5 x 10 ¹⁵ Ohm/cm	Tensile strength	40 N/mm ² ± 10 %	
Surface resistance	DIN 53482	10 ¹³ Ohm	Temperature range (ambient): – 30 °C up to + 60 °C		
Leakage resistance	IEC 112/VDE 0303	CTI 600–2.7			
Flame test proof:			Resistance to chemicals:	Gasoline	Sulphuric acid 50 %
no flaming particles,	DIN 41 02 –	Class B 1	at + 45 °C	Mineral Oil	Caustic soda 25 % & 50 %
self extinguishing	Part 1			Grease	Hydro-chloric acid, concentrated

Consider the voltage drop calculation to maintain the limits established by the motor manufacturers:

Formulas:

AC: $\Delta U = \sqrt{3} \times I \times \ell \times Z$

DC: $\Delta U_1 = 2 \times \ell \times I \times R$

$$\Delta U_2 = \frac{\Delta U_1 \cdot 100}{V}$$

ΔU_1 = Voltage drop [V]
 ΔU_2 = Voltage drop [%]
 I = Ampere load [A]

R = Resistance [Ohm/1000 m]
 ℓ = Power feed length [m]
 L = System length [m]

Effective length:

$\ell = L$ power feed located at the end of the system
 $\ell = L/2$ power feed located at the mid-point of the system
 $\ell = L/4$ power feed located at both ends of the system
 $\ell = L/6$ power feed located at $L/6$ from each end of the system
 Z = Impedance [Ohm/1000 m]
 V = Voltage rating [V]

**The total ampere load is determined from the nominal rated current of all motors working simultaneously on the same feed section of your electrification system. A diversity factor of 0.5 – 0.9 can be considered.
The conductor size and/or number of feed points should be increased or booster cables should be used in parallel in case the drop is exceeding the limitations.**

Application of Anti-condensation section

This section consists of 1 m Powerail with openings covered by a protection hood.

The anti-condensation section will be used where Powerails are passing from indoor to outdoor, preventing the icing of the outside mounted Powerail as the warm air can escape and does not condensate in the Powerail.

Feeding

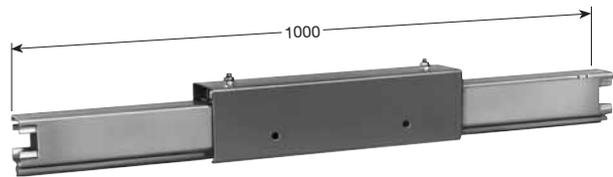

No extra feeds required as the Powerail is not interrupted.

Collectors

No extra collectors required.

Installation

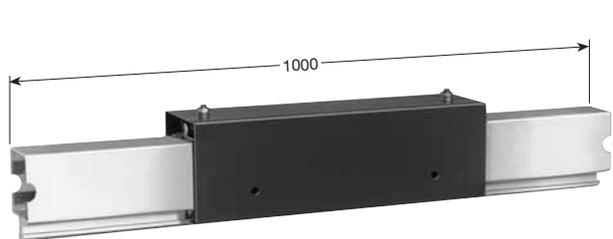

The anti-condensation section will be placed directly at the transfer point from indoor to outdoor service.

⁽²⁾ For longer runs use Expansion joint section (see page 19).

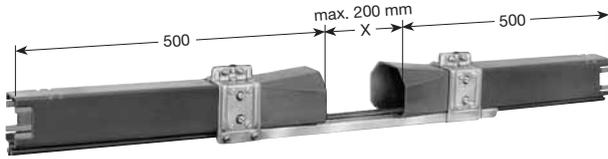

⁽³⁾ Suffix types e.g. BTK 4/60 w/ PE → BTK 4 /60 **HS** Cat.-No. 258 652.

TELESCOPE SECTIONS⁽¹⁾

incl. 1 m section

KBSL
KSL
KSLT
KSG

The telescope section is assembled on a 1 m Powerail section and compensates the expansion during temperature fluctuation.

The section consists of two transfer guides. The connecting profiles serve as running and guiding track for the current collectors. The Powerail is electrically separated. Sealing strip and slot guiding of the KSLT are interrupted in the area of the telescope section (chamfer ends as per installation instruction)

The telescope sections are used in the following cases:

1. For Powerail lengths exceeding 150 m. The maximum measure between two fixpoints with the telescope section placed in the center is 70 m (see fig. 1).
2. For passing the Powerail from indoor to outdoor, thus preventing the icing of the outside mounted Powerail, as the warm air can escape and does not condensate in the Powerail (see fig. 2). – Alternate solution: Anti-condensation section (see page 17).
3. If the Powerail length between 2 curves is more than 20 m (see fig. 3).

During intense temperature fluctuation it might be necessary to decrease a.m. measures. Please consult our factory in these cases. Alternatively expansion sections can be used (page 19).

Feeding

The Powerail is electrically separated into 2 parts by the telescope section. Provide each of these sections with a separate feeding.

When passing the Powerail into the outdoor area the main feed point can be placed indoor. In this case install a terminal box on the left and right hand side of the telescope section and connect them by a flexible cable (see fig.2).

Collectors

In order not to interrupt the electrical contact when passing the telescope section, two current collectors of an adequate capacity must be provided with a center distance of at least 500 mm. If in case of higher power consumption double collectors must be used consider two sets accordingly.

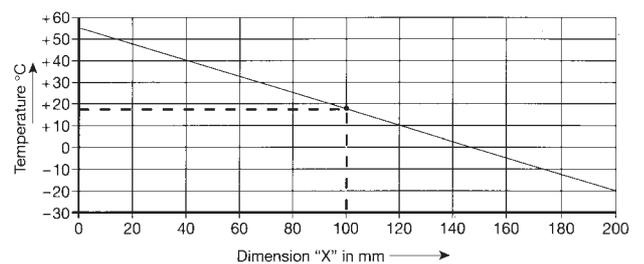

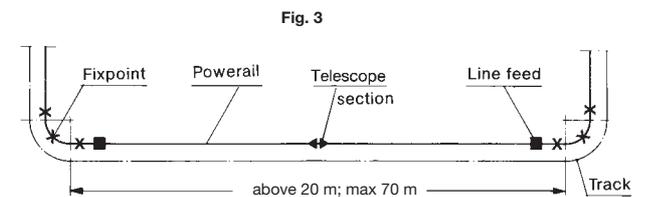

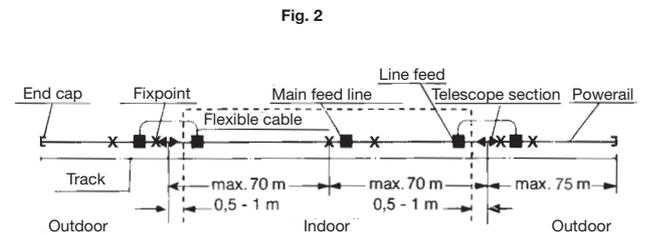

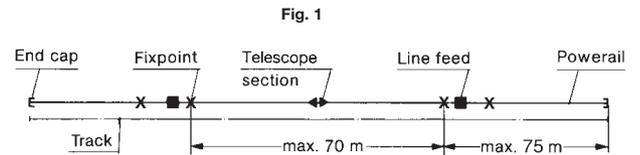

Mounting

The telescope section is installed in the center between two fixpoint hangers. The Powerail is installed with sliding hangers according to mounting instructions.

The gap dimension «X» between the transfer guides depends on the ambient temperature when mounting the Powerail (see adjacent diagram). The diagram is based on a Powerail length of 70 m between the fixpoints.

Example: Mounting temperature 18° C, «X» = 100 mm

Expansion joint sections are required to compensate for expansion and contraction of KSL Powerail in varying temperatures without interrupting electrical power.

The expansion joints are used if the Powerail length between two curves, switches or other fix points is exceeding 20 meters, or corresponding to a temperature difference (t) of

- $\Delta t \ 20^\circ \text{C} = 100 \text{ m}$
- $\Delta t \ 30^\circ \text{C} = 68 \text{ m}$
- $\Delta t \ 40^\circ \text{C} = 50 \text{ m}$
- $\Delta t \ 60^\circ \text{C} = 34 \text{ m}$
- $\Delta t \ 80^\circ \text{C} = 25 \text{ m}$

Adjacent sketches, Fig. 1 and Fig. 2 show this type of application. Longer runs or a higher difference in temperature require several expansion joints or the telescope section as explained on page no. 18 of this catalog. When in doubt please consult the factory.

For arrangements of the fixpoints refer to sketch 1-3. The rest of the Powerail is mounted in sliding hangers.

Feeding

Expansion joints do not interrupt electrical power, so there is no need for an extra feeding. Expansion joints do not influence the voltage drop of a system.

Current collector

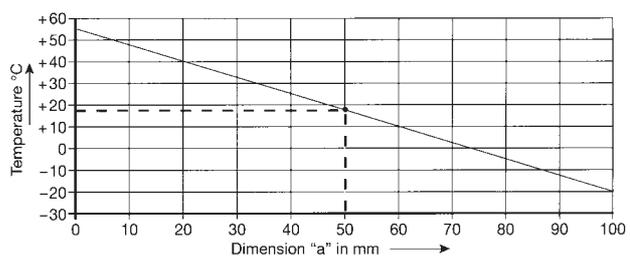

No special or extra collector required.

Mounting

The expansion joint section is installed on sliding hangers in the center between two fix points.

The gap dimensions «a» depends on the ambient temperature during installation. See adjacent diagram and example.

Example: Temperature 18° C
«a» = 50 mm

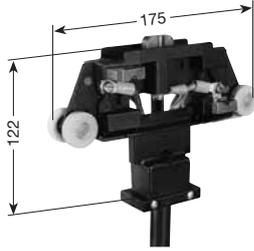

⁽¹⁾ Above sections come ready assembled on 1 m Powerail and are a part of the system length.

⁽²⁾ Suffix types e.g. DVK 4/60 w/ PE → DVK 4 /60 HS Cat.-No. 252 430.

KTW-SYSTEM WITH KBSL OR KSLT

These systems are unique to feed electrical tools, such as drilling machines, grinders, screw drivers etc. along assembly lines or above work benches in any type of plant.

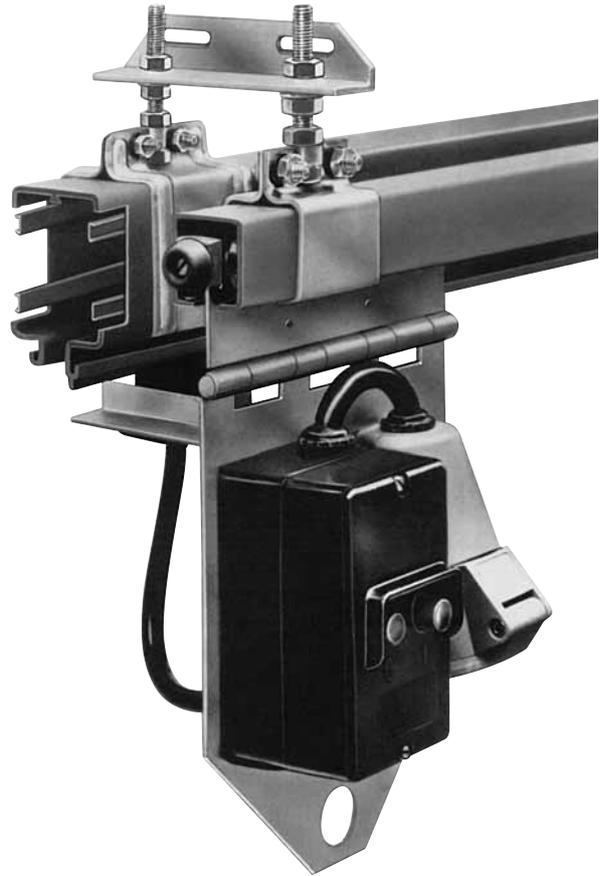

No power cables on the floor to cause accidents and no obstruction to personnel by trailing cables.

Containers or baskets carrying bolts and nuts or other hardware for the assembling work can also be supported from and pushed along the carrier rail.

The KTW-Systems comprise a galvanized C-track taking the carrier trolleys or other hook-up elements, and the Enclosed Powerail with 4 or 5 conductors of 40 to 200 Amp. capacity.

Carrier rail and Powerails are fixed to common brackets which serve as suspension structure.

The Collector has a mechanical towing arm connection to the Carrier Trolley and the collector cable feeds into a plug and socket system or circuit breaker unit. These units as per customer's choice are mounted to the attachment plate of the carrier trolley. These optional elements can be factory assembled or field mounted (see adjacent photo).

Engineering Data:

Powerail KBSL-KSLT

40 A (100% DF) copper conductor	10 mm ²
60 A (100% DF) copper conductor	15 mm ²
100 A (100% DF) copper conductor	25 mm ²
140 A (100% DF) copper conductor	35 mm ²
200 A (80% DF) copper conductor	50 mm ²

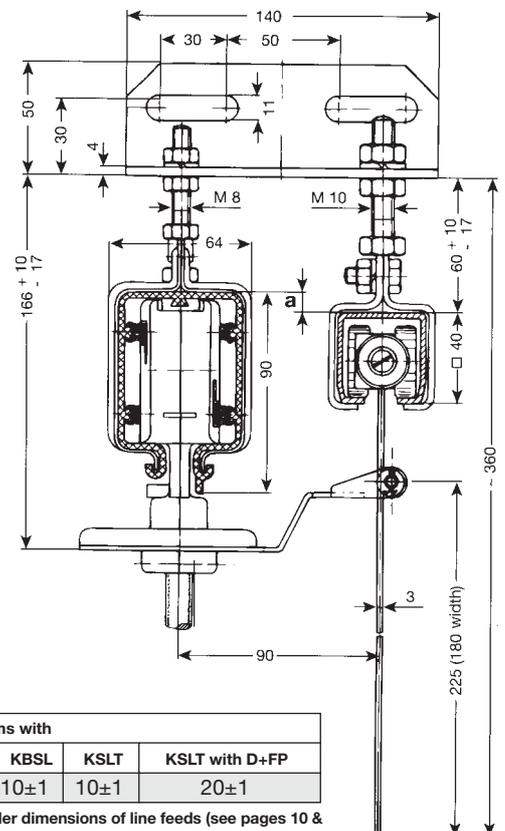

Voltage rating:	up to 600 V
No. of conductors:	4 & 5
Std. sections:	4 m, other sections available
Support distance:	variable up to 2 m
Temperature resistance:	-30° C/+60° C
Collector rating:	40 A & multiple (60% DF)
Weight:	1.650 up to 3.355 kgs/m (see page 4)

C-track □ S 2

Section modulus Wx:	3.1 cm ³
Moment of inertia:	6.7 cm ⁴
Material:	Galvanized steel
Std. sections:	4 m, other sections available
Support distance:	variable up to 2 m
Weight:	2.5 kgs/m

Carrier Trolley

Carrying capacity:	up to 50 kgs
Weight:	approx. 1.5 kgs
